Standard colours PLIO-R :

Characteristics

Printed markers are manufactured of PLIOFINE and PLIO-R heat shrinkable sleeving and allow an aesthetic print. They are applied by simply sliding on to the conductor before shrinking.

They are hot printed, radial or axial markings, in one or several lines, with letters, figures or graphics. Standard marker length range from 10 to 100 mm, cut or pre-cut.

All markings over 100 sleeves per size, length, colour and print are possible.

When no dimension is stated, the print height will be defined by our technical department.
